

Web Novel Writer's Guide

A plain-English walkthrough of the two forms you fill in on the platform — the Profile form and the Story form — and exactly what to type in each field so the AI writes in *your* voice.

How to use this guide

On the platform you will interact with two endpoints. Each one corresponds to a form. This guide walks through every field in each form, explains what the AI does with that field, and shows you how to write an answer that gets the best result.

- **Step 1 — Generate your Profile once.** This captures how *you* write. You only do this one time.
- **Step 2 — Create a Story.** You can create unlimited stories that reuse the same profile. Every book will sound like you.

The golden rule: the AI can only match what you give it. Vague input makes vague prose. Specific, vivid, honest input makes specific, vivid, honest prose.

Part 1 — The Profile Form

```
POST /api/profiles/generate/
```

This form builds your **reusable author voice**. When you submit it, three AI agents (the Profiler, the Empath, and the Masterclass) read everything you wrote and produce three internal documents:

- **Author Profile** — how you write (sentences, vocabulary, quirks).
- **Emotional Guidelines** — how you express feelings on the page.
- **Style Expertise** — the craft techniques you lean on.

Those three documents are then injected into every story you create using this profile. You do this **once**, and every book thereafter sounds like you wrote it.

Field overview

Field	Type	Required	Default
name	string	Yes	—
background	string	No	(empty)
personality	string	No	(empty)
communication_style	string	No	(empty)
interests_and_values	string	No	(empty)
quirks	string	No	(empty)
additional_context	string	No	(empty)
expert_style	string	No	(empty)
expert_writing_sample	string	No	(empty)
writing_samples	list of strings	No	[] (empty list)

Technically only **name** is required. Practically, the more fields you fill in honestly and concretely, the closer the generated voice will match yours. Treat every field as an opportunity to teach the AI something specific about how you write.

Field: name

Your pen name or real name. This is a label the AI uses internally and it will appear in the stored profile. It does not change the generated prose.

Example

```
"name": "Ada Okoro"
```

Field: background

Who you are as a writer and as a person — where you grew up, the formative experiences that shaped how you see the world, the subjects you come back to without meaning to.

What the AI uses this for

Your background leaks into your prose whether you want it to or not: the settings you reach for, the conflicts that feel natural to dramatise, the metaphors you pick. The Profiler agent uses this field to predict those patterns so the generated prose reads like it came from someone with your history.

How to fill it in well

- Write 3–6 full sentences. Bullet points are fine.
- Be specific: name real places, real jobs, real subcultures.
- Mention anything that influenced your taste in fiction.
- Don't write a CV — write the parts that changed how you see things.

Good example

"Grew up in Port Harcourt, eldest of four. Parents ran a small pharmacy; I spent afternoons behind the counter listening to customers argue about everything from politics to spoiled yam. Studied engineering but left to write. I care most about power — who has it in a room, who pretends not to, and how ordinary people bend around it."

Weak example (avoid)

"I am a writer. I love books and I like to write stories about life and people."

Field: personality

Your temperament on the page. What actually makes you angry. What you find funny. What you are afraid of. Whether you lead with warmth or with distance.

What the AI uses this for

The Empath agent turns this into emotional guidelines — the rules that govern how tension rises and falls in your chapters, how your characters express vulnerability, and what emotional notes you avoid. Your personality becomes the story's emotional fingerprint.

How to fill it in well

- Pair opposites — e.g. *patient with strangers, impatient with family*.
- Describe what pisses you off. Pettiness welcome. This is gold.
- Say whether you deflect with humour, go quiet, or confront head-on.
- Name a fear — not a generic one; a specific one.

Good example

"Dry, impatient, sarcastic with people I love and formally polite with people I don't. Anger arrives late but lasts. I deflect sadness with jokes until I can't, and then I get quiet. I hate being condescended to more than almost anything. Afraid of ending up boring more than of failing."

Field: communication_style

How you actually talk and write when nobody is watching. Short sentences or long ones. Formal or loose. Do you use semicolons. Do you swear. Do you pile clauses on top of each other or strip them

down.

What the AI uses this for

This is the single biggest lever on sentence-level prose. The Profiler uses it to decide average sentence length, paragraph rhythm, vocabulary register, dialogue naturalness, and which tics (em-dashes, fragments, parentheticals) to imitate.

How to fill it in well

- Describe your sentences: short and punchy, long and winding, or mixed.
- Name your punctuation habits: em-dashes, ellipses, parentheticals.
- Say whether you use slang, pidgin, code-switching, dialect.
- Give one-line examples of phrases you actually say or write.

Good example

"Short sentences, then a long one when I want to slow the reader down. Heavy em-dash user. I code-switch between English and Pidgin in dialogue when characters are relaxed. Avoid semicolons. I like sentence fragments. Often. Contractions always — "she'd" not "she would" unless I'm being ironic."

Field: interests_and_values

What you care about deeply, even when it is inconvenient. What you read about for fun. The hills you will die on. The topics that you find yourself arguing about at 1am.

What the AI uses this for

These become the thematic undercurrent of every story. They decide which details the narrator lingers on, which characters get moral weight, and what a scene is really *about* underneath the plot.

Good example

"Class mobility, and the small humiliations people swallow to keep moving up. West African folk tales retold without sanitising them. Architecture and how buildings tell you who a city is for. I value loyalty, but only the uncomfortable kind — the kind that costs."

Field: quirks

Your tics. Habits. Catchphrases. Pet peeves. The recurring patterns your friends could identify even in an anonymous text.

What the AI uses this for

Quirks are what separates a *competent* voice replica from one that actually fools a reader. The Profiler bakes them into signature moves — recurring images, verbal tics, structural habits — so the prose has fingerprints.

How to fill it in well

- List actual words and phrases you overuse.
- Mention structural habits (e.g. opening chapters on weather).

- Include pet peeves — things you *refuse* to write.

Good example

"I overuse the word 'almost'. I end paragraphs on a one-word sentence when I want a beat. I always describe food before I describe the room. I refuse to write scenes set in airports — they bore me. I start a lot of chapters with somebody lying."

Field: additional_context

Anything else that matters but didn't fit above. A specific author you are often compared to. A genre you are moving toward or away from. A creative constraint you want the AI to respect.

Good example

"I want my prose to feel closer to literary fiction than to commercial romance, even when the plot is commercial. Avoid purple prose. Avoid the word "orbs" for eyes. If a sentence sounds like a movie poster, rewrite it."

Field: writing_samples

The most powerful field on the form. A list of chunks of text that *you* actually wrote. Short stories, chapter excerpts, long posts, even polished messages — anything that is your real voice on the page.

What the AI uses this for

All three Phase 1 agents read every sample. The Profiler quotes short phrases as *evidence* when building your voice model. The Empath studies how you handle emotion in context. The Masterclass studies your craft — pacing, dialogue mechanics, sensory priorities. Samples are worth more than any number of bio fields because they show instead of tell.

How to fill it in well

- Provide 2–5 samples. More is better than fewer.
- Each sample should be 300–2000 words. Avoid tiny snippets.
- Pick samples that represent the voice you want — not old work you have outgrown.
- Include at least one sample with dialogue and one without.
- Prefer finished prose over drafts. The AI will imitate quality too.
- Do **not** paste other writers' work. The AI will mimic whatever you submit.

If you have to choose between filling in biography fields and providing writing samples, **choose samples every time**. A real paragraph of your prose is worth ten paragraphs of description.

Format (JSON)

```
"writing_samples": [ "Full text of sample 1 ...", "Full text of sample 2 ...", "Full text of sample 3 ..." ]
```

Fields: expert_style & expert_writing_sample

Optional advanced controls. If you want your prose to also absorb craft from a specific professional writer you admire, use these fields. When either is provided, the Masterclass agent uses them directly

instead of inferring style techniques from scratch.

expert_style

A short essay describing a professional writer's craft — their pacing, dialogue habits, sensory priorities, structural moves. Write it in your own words. This is *about* them, not *by* them.

expert_writing_sample

A passage written by that expert, used as craft reference. The AI studies their technique; it does not copy their voice (yours comes from the other fields).

Leave both blank if you are just starting. You can always regenerate the profile later.

Full request example

Here is what a strong, complete POST body looks like. Notice that every field is concrete, specific, and short enough to read — no filler.

```
POST /api/profiles/generate/ Content-Type: application/json { "name": "Ada Okoro",
"background": "Grew up in Port Harcourt, eldest of four. Parents ran a pharmacy;
afternoons behind the counter taught me how ordinary people argue about power.",
"personality": "Dry, impatient, sarcastic with people I love. Anger arrives late and
lasts. Deflect sadness with jokes until I can't; then I go quiet.",
"communication_style": "Short sentences, then one long one to slow the reader. Heavy
em-dash user. Code-switch to Pidgin in relaxed dialogue. Contractions always.",
"interests_and_values": "Class mobility and the small humiliations it costs. West
African folk tales told without sanitising them. Architecture as politics.",
"quirks": "Overuse 'almost'. End paragraphs on a one-word sentence when I want a
beat. Describe food before the room. Often start chapters with someone lying.",
"additional_context": "Literary over commercial even when the plot is commercial.
Avoid purple prose and the word 'orbs' for eyes.", "writing_samples": [ "", "" ] }
```

What you get back

```
{ "profile_id": "b4e9...", "name": "Ada Okoro", "author_profile_preview": "...",
"emotional_guidelines_preview": "...", "expert_styles_preview": "..." }
```

Save the **profile_id**. You will paste it into every story request from now on.

Part 2 — The Story Form

```
POST /api/stories/create/
```

This is the form you fill in every time you start a new book. It is short on purpose: the heavy lifting (voice, emotional tone, craft) already lives in your profile. This form tells the AI *which book* to write in that voice.

Field overview

Field	Type	Required	Default
book_title	string (≤300 chars)	Yes	—
book_description	string (≤5000 chars)	Yes	—
num_chapters	integer (1–30)	Yes	—
platform_genre	string	No	(empty)
lead_type	string	No	(empty)
target_reader	string	No	(empty)
content_rating	string	No	(empty)
tags	list of strings	No	[]
must_include_tropes	list of strings	No	[]
must_avoid_tropes	list of strings	No	[]
release_goal	string	No	(empty)
profile_id	string	No	null
initial_chapters	integer (1–30)	No	3

Serverless AI model routing (admin setup)

The platform can use different Together serverless models for different agents. This keeps prose quality high where readers notice it, while cheaper models handle review, summaries, continuity, and publishing metadata.

```
Recommended environment configuration: TOGETHER_DEFAULT_MODEL=MiniMaxAI/MiniMax-M2.7
TOGETHER_PLANNER_MODEL=moonshotai/Kimi-K2.5
TOGETHER_WRITER_MODEL=moonshotai/Kimi-K2.5
TOGETHER_REVIEWER_MODEL=openai/gpt-oss-120b
TOGETHER_CONTINUITY_MODEL=MiniMaxAI/MiniMax-M2.7
TOGETHER_SUMMARY_MODEL=MiniMaxAI/MiniMax-M2.7
TOGETHER_PUBLISHER_MODEL=MiniMaxAI/MiniMax-M2.7
```

If only the legacy `TOGETHER_MODEL` variable is set, unconfigured roles fall back to it. This keeps old deployments working while allowing new deployments to route each pipeline stage deliberately.

Field: book_title

The working title of the book. Up to 300 characters. This appears in the manuscript, the dashboard, and is passed to every agent in the pipeline.

What the AI uses this for

The Storyteller agent treats the title as a genre and tone signal. *The Girl Who Burned Lagos* tells the AI something very different than *Payroll*. A vague title like *My Book* gives the AI nothing to work with.

How to fill it in well

- Give the title you would actually put on the cover, even if it is provisional.
- Make it carry weight — a concrete image, a concrete tension, a character name, or a promise.
- If you are unsure, write the title that matches the *feeling* you want the prose to have.

Good vs weak titles

- ✓ "The Girl Who Burned Lagos"
- ✓ "Payroll"
- ✓ "Things We Do Not Bury"
- ✗ "My Novel"
- ✗ "Book Idea 3"
- ✗ "Untitled"

Field: book_description

By far the most important field on this form. Up to 5000 characters. This is the blueprint the AI uses to plan the entire book — characters, arcs, world, emotional range, stakes.

What the AI uses this for

- **The Storyteller** reads it and plans all N chapters upfront — title, summary, key events, characters involved, and emotional arc for each.
- It builds the full **character bible** (names, roles, motivations, arcs) from here. Any character not implied by your description may be invented by the AI.
- The **LaunchChapterPlanner** turns the plan into a Chapter 1 conversion brief: first-200-word hook, protagonist sympathy, special edge tease, early tag proof, progression reward, and cliffhanger.
- It seeds the **initial running summary** that the Writer uses from chapter 1 onwards.
- It drives the **continuity ledger** — world rules, significant items, plot seeds — so later chapters stay faithful to the world you implied.

How to fill it in well

Think of this as a detailed pitch. Aim for 300–1500 words of real substance. Structure it any way you like, but cover the areas below. Anything you leave out is a decision the AI will make for you.

What to include

- **Premise.** One or two sentences that state the hook.
- **Protagonist(s).** Name, age, occupation, what they want, what is in their way, and a meaningful flaw.
- **Key supporting cast.** 2–5 named characters with one line each on role and relationship to the protagonist.

- **Setting.** Time period, place, atmosphere. Be specific — *1990s Lagos, rainy season, a house on Bourdillon Road beats modern city.*
- **Central conflict.** What is at stake, for whom, and why now.
- **Tone and genre.** Literary thriller? Slow-burn romance? Folkloric horror? Say it plainly.
- **Rough arc.** Beginning, turning point, ending — even two sentences each helps enormously.
- **Hard constraints.** Anything the AI must or must not do (e.g. no magic, stays in one POV, no character dies).

Every named character, object, and place you mention here becomes part of the continuity ledger from chapter 1. The AI will not forget them. If you don't name someone, the AI may invent them — and then be stuck with that invention.

Good example (condensed)

"Set in 1998 Lagos. Ifeoma, a 34-year-old pharmacist running her late father's shop on Agege Motor Road, finds a ledger hidden behind a crate of paracetamol showing that her father was laundering money for a state commissioner. She has two weeks before an audit. Her younger brother Obi, a junior civil servant, is named in the ledger and does not yet know. Her mother, Adaeze, is in early-stage dementia and alternates between lucid grief and repeating a nursery rhyme from their village. Literary thriller, slow-burn, first person past tense from Ifeoma's POV. The tone should be dry and observant — humour used to deflect from pain. No violence on the page; violence happens off-screen and lands in conversations. The commissioner, Chief Dike, is the antagonist but only appears in chapters 4, 8, and 11. Ending: Ifeoma burns the ledger but keeps a single page — ambiguous whether she will use it."

Weak example (avoid)

"A woman finds a secret from her father. She has to decide what to do. It is set in Nigeria and has family drama. There is some suspense."

Field: num_chapters

Integer between 1 and 30. The full length of the book.

What the AI uses this for

- The Storyteller plans *exactly* this many chapters up front, pacing the arc across them.
- Each chapter is written to a **minimum of 2000 words** (target 2500–3000), so a 15-chapter book is roughly 30k–45k words.
- The AI never writes fewer or more chapters than you ask for.

How to choose

- Short story / novella: 3–6 chapters.
- Standard novella: 8–12 chapters.
- Full novel within the 30-chapter cap: 15–25 chapters.

- If you are unsure, start smaller. You can always start a new book; you cannot easily cut in half a book that was planned too long.

Optional Webnovel preference fields

These fields steer the new Webnovel strategy layer. You can leave all of them blank and let the AI infer the best market position from your title and description, but they are useful when you know the exact reader lane you want.

- **platform_genre** — preferred Webnovel category, such as Fantasy, Urban, Games, Eastern, Teen, LGBT+, or General.
- **lead_type** — male lead, female lead, ensemble, or another reader-facing lane.
- **target_reader** — who should enjoy this serial and what they already like.
- **content_rating** — general, teen, mature, R18, or your own house label.
- **tags** — Webnovel-style discovery tags the story must honestly deliver, such as WEAKTOSTRONG, REVENGE, SYSTEM, BETRAYAL, or ROMANCE.
- **must_include_tropes** — tropes you want built into the plan.
- **must_avoid_tropes** — tropes, content, or patterns the AI must stay away from.
- **release_goal** — desired launch rhythm, stockpile, or update target.

Do not add popular tags just because they are popular. If the prose does not actually satisfy the tag, readers will feel misled and the book will attract the wrong audience.

Automatic launch chapter plan

After the full story plan is created, the platform now runs a dedicated LaunchChapterPlanner. You do not fill in extra form fields for this. It creates an internal brief that the Writer, Reviewer, Perfectionist, and Publisher all use for Chapter 1.

- **First 200 words.** The opening must show pressure, desire, humiliation, danger, mystery, betrayal, romantic tension, or a clear unfairness before broad setup.
- **Protagonist snapshot.** Readers should quickly know what the lead wants, what limits them, and why they are worth following.
- **Special edge tease.** The system, rebirth knowledge, rare talent, hidden status, or repeatable advantage should be hinted early.
- **Tag proof.** The launch batch must visibly satisfy the chosen tags instead of merely listing them.
- **Progression reward.** Chapter 1 must deliver at least one small win, clue, leverage shift, power signal, relationship spark, or survival step.
- **Cliffhanger.** The ending should make Chapter 2 feel necessary, not optional.

This is why the description should include the protagonist's desire, stakes, limitation, and special edge clearly. If those details are missing, the launch planner has to infer them.

Field: profile_id

The ID returned when you generated your profile (Part 1). Paste it here to make this book sound like you.

What happens when you provide it

- The AI **skips Phase 1 entirely** — no new Profiler, Empath, or Masterclass calls.
- Your stored *author_profile*, *emotional_guidelines*, and *expert_styles* are injected directly into the Storyteller and the Writer.
- The book starts faster and sounds closer to you than any generic run ever could.

What happens when you omit it

The AI runs Phase 1 with **generic prompts**, building a competent but anonymous author voice from the book title and description alone. Readable, but not yours.

What happens when the ID is invalid

The request returns **400 Bad Request**. Nothing is written. Double-check the ID you saved from Part 1.

Once you have a profile, always pass `profile_id`. There is no reason to run a book without it.

Field: `initial_chapters`

How many chapters to draft in this first run. Defaults to 3. Clamped between 1 and `num_chapters`.

Why this exists

Writing a chapter is expensive (it is a real AI generation, not a template). For long books, you probably want to read the first few chapters and decide whether the voice feels right *before* committing to 25 more. That is exactly what `initial_chapters` controls.

How it works

- The Storyteller always plans the **full** book, regardless of this value.
- The Writer loop only drafts up to *initial_chapters*.
- When it finishes, the story parks in status **awaiting_continue**.
- You then call **POST /api/stories/<id>/continue/** with `{"additional_chapters": N}` to draft the next batch.
- If `initial_chapters` equals `num_chapters`, the book is written in one run and finalised immediately.

Suggested values

- **3** — default. Good for most writers. Read, judge, resume.
- **1** — ultra-careful. Useful for a new profile you have not tested yet.
- **= num_chapters** — write it all in one shot. Use when you trust the profile and want the whole manuscript at once.

Full request example

```
POST /api/stories/create/ Content-Type: application/json { "book_title": "Things We Do Not Bury", "book_description": "Set in 1998 Lagos. Ifeoma, a 34-year-old pharmacist running her late father's shop on Agege Motor Road, finds a ledger...", "num_chapters": 15, "platform_genre": "Urban", "lead_type": "female lead", "target_reader": "Readers who like family secrets, revenge, and slow-burn suspense.", "content_rating": "mature", "tags": ["REVENGE", "FAMILYSECRET", "STRONGFL"], "must_include_tropes": ["hidden evidence", "status reversal"], "must_avoid_tropes": ["random magical rescue"], "release_goal": "Launch with 5 chapters, then update daily.", "profile_id": "b4e9-your-saved-profile-id", "initial_chapters": 3 }
```

Response

```
{ "story_id": "c22a...", "status": "pending", "profile_used": true, "initial_chapters": 3, "num_chapters": 15, "webnovel_preferences": { "platform_genre": "Urban", "lead_type": "female lead", "tags": ["REVENGE", "FAMILYSECRET", "STRONGFL"] } }
```

Generation runs in the background. Poll **GET /api/stories/<story_id>/** to watch progress. When status becomes *awaiting_continue*, read the draft and, if you are happy, call the *continue* endpoint to request more chapters.

Quick checklists

Before you submit a profile

- Name is set.
- Background names real places, times, or subcultures — no generalities.
- Personality includes at least one thing that annoys you and one thing you are afraid of.
- Communication style describes sentence length and at least one punctuation habit.
- Quirks include words you overuse and patterns you repeat.
- At least 2 writing_samples are included, each 300+ words.
- Every writing sample is yours. No other writer's work is mixed in.

Before you submit a story

- Title is evocative, not a placeholder.
- Description is 300–1500 words of real substance.
- Every main character is **named** in the description.
- Setting is specific: place + time + atmosphere.
- Central conflict, stakes, and tone are stated plainly.
- Any hard constraints (POV, off-screen events, no magic, etc.) are written down.
- Optional Webnovel preference fields only include tags and tropes the chapters can honestly deliver.
- The first chapter promise is clear: hook, protagonist desire, stakes, special edge, progression reward, and next-chapter pull.
- num_chapters is realistic for the amount of story you described.
- profile_id is set to your saved profile.
- initial_chapters is chosen deliberately (default 3 is fine).

Common mistakes that ruin output

- **Vague descriptions.** Generic descriptions produce generic books. The AI cannot invent the specifics you withheld.
- **Skipping writing_samples.** Without samples, your profile is mostly guesswork based on bio fields.
- **Forgetting profile_id.** Your story will sound fine — but it will not sound like you.
- **Over-requesting chapters.** Setting num_chapters=30 when the premise only supports 10 produces padding. Match length to story.
- **Unnamed characters.** If you call someone "the protagonist's mother", the AI will name her for you — and you may not like it.

- **Contradicting the profile.** If your profile says "literary, avoid purple prose" and your description asks for "lush, opulent, poetic" — the AI will compromise, badly.
